

SKILLS

Languages & Frameworks:

- Python, Frappe Framework, ERPNext, JavaScript (ES6+), HTML5, CSS3, Jinja

Backend/Frontend:

- Flask, FastAPI

Databases:

- MariaDB/MySQL, PostgreSQL

Tools:

- Git/GitHub, Linux/Unix, Docker, Postman, REST APIs, Vercel

Concepts:

- ERPNext Customization (DocTypes, Server/Client Scripts, Print Formats), REST API Design, Database Management, Agile/Scrum, Testing, Performance Tuning
- CI/CD Principles (GitHub Actions)
- Asynchronous Task Queues (Celery, Redis)

SOFT SKILLS

- Problem-solving & debugging (engineering mindset, root cause analysis)
- Team collaboration & stakeholder communication in Agile/Scrum
- Quick tech adaptation & continuous learning across SDLC phases
- Documentation, requirement gathering & user story writing
- SDLC & Agile lifecycle management (planning, testing, delivery)
- Performance tuning for scalability, reliability & applications

PROFILE SUMMARY

A results-driven Frappe/ERPNext Developer with 2 years of project-based experience architecting and building custom business applications on the Frappe framework. Expert in translating complex business requirements into clean, scalable code, with a proven ability to deliver measurable outcomes in workflow automation, API integration, and performance optimization.

EXPERIENCE

Frappe Developer | Gravity Inc. (E-commerce Operations)
|2023 - Present

- Worked in the architecture and development of a custom e-commerce operations platform on the Frappe framework, serving as the central ERP for multi-channel sales (Shopify, Amazon).
- Engineered a robust third-party API integration layer to connect ERPNext with Shopify and Amazon SP-API, cutting data sync failures from 12% to 2% by implementing idempotency, retry/backoff logic, and detailed logging.
- Automated key business processes, including order fulfillment and payment reconciliation, by writing complex server-side Python scripts, reducing manual work by over 60%.
- Designed and built a suite of custom Script Reports and Dashboard Charts to provide real-time, data-driven insights into sales trends, inventory levels, and platform health.
- Built a command-line tool (CLI) using Python (Pandas, Requests) to validate and import large CSV datasets into ERPNext, reducing manual import time by 70%.
- Refactored critical APIs with parameterized SQL queries and selective caching, improving P95 API response time by 35%.
- Managed the end-to-end development lifecycle, including writing migration patches for schema changes, maintaining a Git-based Linux dev setup, and writing unit tests to raise code coverage toward 80%.

EDUCATION

Bachelor's in Civil Engineering (2015 - 2019)
Kathir College of Engineering, Coimbatore
